

# Environmental Canine Services Has Relocated to New Hampshire!

*ECS is partnering with FB Environmental*

Environmental Canine Services (ECS) moved to northern New England in April and has opened a northeast branch of ECS in Portsmouth!

**WHAT IS CANINE DETECTION?** An EPA-approved method to identify human sources of bacteria in water bodies through the use of scent-trained canines. The canines detect the presence of the contamination in stormwater outfalls, catch basins and shorelines, and can efficiently and effectively help track the source.

## TOGETHER, FBE WATER QUALITY SCIENTISTS AND ECS EXPERT DOG HANDLERS OFFER:

- ⇒ Comprehensive, Cutting-Edge and Affordable IDDE Services to Address Pathogen Issues in the Surface Waters throughout New England.
- ⇒ A Rapid Screening Method to Determine the Presence/Absence of Human Sources of Bacteria through Canine Detection.
- ⇒ Shoreline and Stream Channel Investigations to Identify Bacteria Seepages.
- ⇒ Recommendations and Guidance for “Next Steps” to Address Water Quality.
- ⇒ Excellent Opportunity for Education and Outreach.
